Controlling Weeds with Livestock and Planning for Drought  
Saturday, August 6, 2011  
9:30 a.m.—2:30 p.m. Lunch included!

9:30– noon: Kathy Voth, Livestock for Landscapes  
Teaching Cattle to Eat Weeds

- Learn the behavioral science behind why livestock avoid weeds and the training process. You will learn the individual training steps. You will also learn what we know about using our new tool (effectiveness, animal health and productivity, economics, etc.).
- Weed-eating cows aren’t limited to traditional forages. Economist John Morley estimated that some producers could have as much as 43% more forage.
- Using Kathy’s process a cattle producer can teach cows to eat weeds in as little as 10 hours over 10 days and then sit back and relax while the cows get to work. A small group of trainees will teach their calves and herd mates to eat weeds, creating a weed eating army in the course of one grazing season.

Noon-1 p.m. Lunch

1-2:30 p.m.: Dr. Casey Matney, Regional Range CSU Extension Specialist, NE CO  
Planning for Drought: Rangeland Management and Grazing

- How to plan for drought now and in the future.
- Techniques for dealing with drought and what to do after drought to protect your land from long term damage.

Where: Pueblo County Conference Room  
1001 North Santa Fe Ave., Pueblo, CO 81003
